

VICTORIA LEISURE CENTRE Nottingham

This £9m project comprised the extension and full refurbishment of the existing building, whilst retaining the historic landmark clock tower.

The 3,100m² leisure facility consists of a 70-station gym, a six-lane 25m swimming pool, a children's fun splash area, a teaching pool, a sauna, steam rooms, a multi-activity studio, squash and basketball courts, conference and meeting facilities, and a children's play area.

We were engaged to complete the Compliance Assessments associated with the design of the engineering services, the overall building design and the energy and thermal envelope performances.

We also managed the information delivery of the BREEAM accreditation requirements.

The scheme integrated high-quality design with significant environmental credentials which helped the building achieve a BREEAM 'Excellent' rating.
